

Financial Warehousing: Proven Architecture

Overview:

The Financial Warehouse has been implemented in many businesses for over 10 years. Each business has had a different source financial system, but the warehouse has proven to be a perfect architecture for all.

“How do I know this architecture will work for my business”

1. The financial warehouse has been implemented in numerous different types of business
2. The architecture is specifically configured to work in a generic fashion
3. Procedures exist to mirror any data structure

The financial warehouse has been proven to work in organisations across various industries and with many different financial systems as a source.

How does Proven Architecture Work?

The financial warehouse structure is delivered in a format that supports the reporting suite, the analysis cubes and bespoke reporting:

Star Schema

1. The star schema structure ensures fast execution of all reports
2. The architecture facilitates clean interaction between analysis cubes and detailed data

Organisation specific

1. Master data services supports data structures from all source financial systems
2. SQL Server forms the basis for real time reporting over live financial systems

Benefits of Financial Warehousing – Proven Architecture

By implementing the financial warehouse, you can be sure that the outputs will be quick and accurate. This has been formed many times and each has demonstrated success.
